

noggin | Launchpads

What are Launchpads?

Launchpads are a dashboard type in Noggin that allow you to configure the user experience process to specific user profiles in your Noggin system (we call these “**user pathways**”).

Launchpads provide a clean, visual “home page” for each user profile to provide quick access to common tasks and information they need to action on a regular basis.

Launchpads help ensure your staff is able to easily access the information they need most, improving user experience and decreasing time to train users.

The Power of Launchpads

- **Get started faster.** Launchpads are available in the Noggin Library so that many user pathways are available out-of-the-box. User pathways can be changed to match variations on user experiences.
- **Access specific tasks or processes.** Enable users to quickly access common tasks and information based on their team, role, or user profile. Access widgets, lists, tables, timelines, maps, charts, and checklists.
- **Know where you are.** Enhance the user experience with “breadcrumbs” to help users easily see where they are at in the system and navigate back to their Launchpad.
- **Build out new applications and processes quickly.** Easily adapt your system to your operations by creating custom Launchpads for any team, role profile, user, process or criteria you choose.
